# Gezond pootgoed @ ILVO 2011

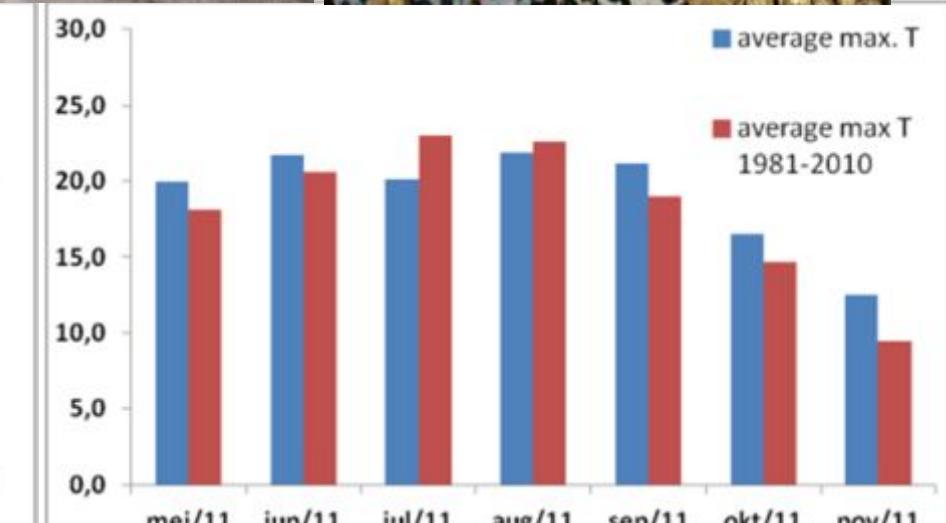

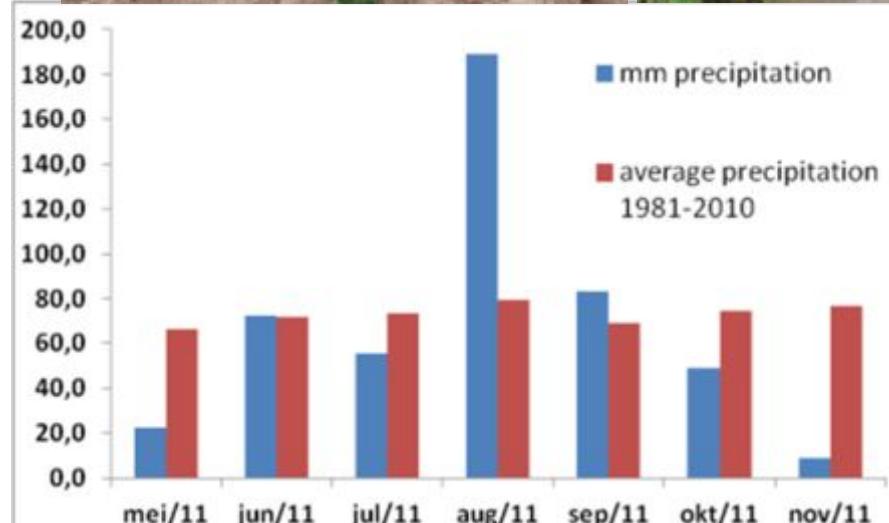

VVP – ALV  
12 december 2011

# Gezond pootgoed @ ILVO 2011

- Het aardappelseizoen 2011
- Top 5 ziekten in pootgoed
- Dickeya & Pectobacterium
- Projecten @ ILVO
- Survey pootgoed
- Identificatie & opsporing
- Virulentie in aardappelrassen
- Dickeya in waterlopen
- Contactbesmetting
- Akkerkwesties
- Bio Control

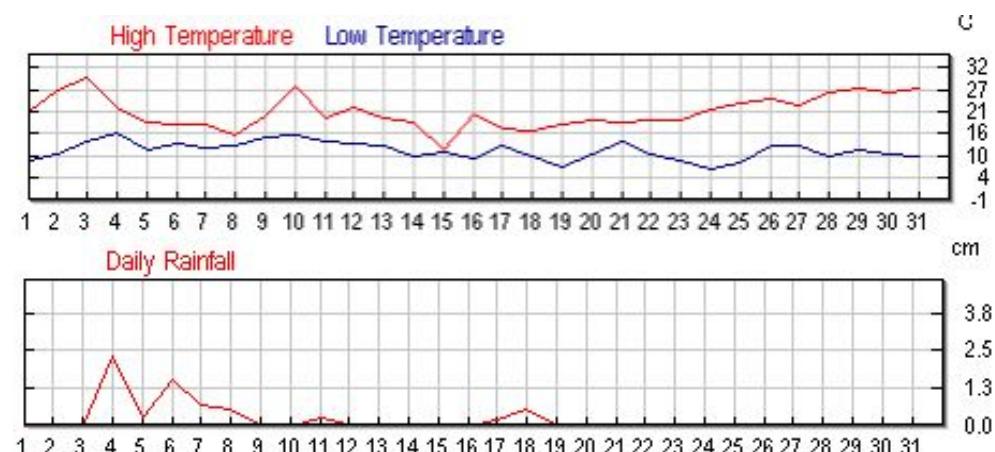

# Het aardappelseizoen 2011

# Het aardappelseizoen 2011

Als 1 rottende knol ~ 100 ml vocht lekt  
1% rotte tubers in 1000 T = ~ 5 m<sup>3</sup> vocht

# Top 5 ziekten in pootgoed in 2011: n°1

*D. dianthicola* ★ *D. solani* ★

# De belangrijkste eigenschappen van *Dickeya*

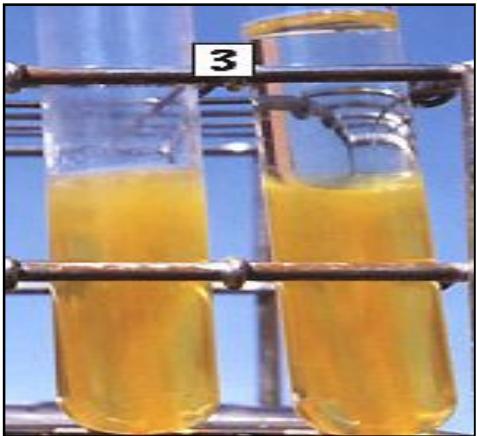

## Pectinolytisch

5 pectinelyasen (A – E): pH4 – pH10

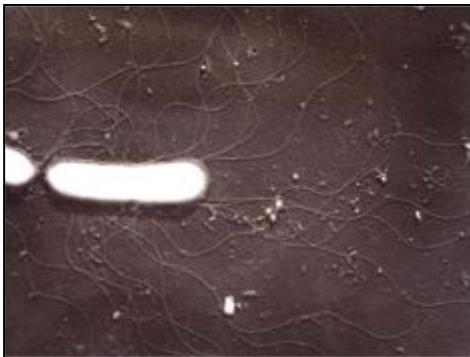

*Pectobacterium*: ook pectinolytisch maar andere pectinelyasen

# De belangrijkste eigenschappen van *Dickeya*

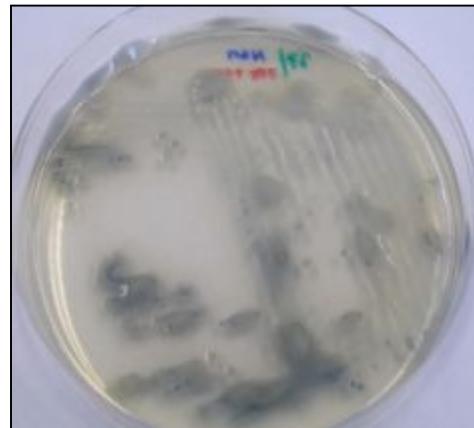

facultatief  
anaeroob

*Pectobacterium* ook

peritrichie  
flagellen

*Pectobacterium* ook

produceert  
indigoidine

*Pectobacterium* niet

# *Dickeya* in aardappel: verwelking

# *Dickeya* in aardappel: zwartbeen

# *Dickeya* in aardappel: maceratie

# *Pectobacterium* in aardappel: *P. atrosepticum*

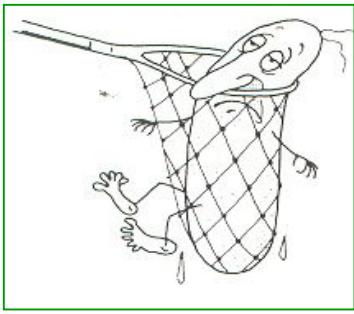

*Pectobacterium* in aardappel: *P. carotovorum* Pcc type 1

# *Pectobacterium* in aardappel: *P. carotovorum* Pcc type 2

# *Dickeya* @ ILVO projecten (1)

- 2008 - lopend  

- Survey in pootgoed (diagnose, detectie)
- Epidemiologie
- Symptoomexpression in relatie tot het levels of contamination in the seed lot
- Symptoomexpressie in aardappelrassen
- Beheersing: verhoogde weerstand

# *Dickeya* @ ILVO projecten (2)

- 2012 – 2013

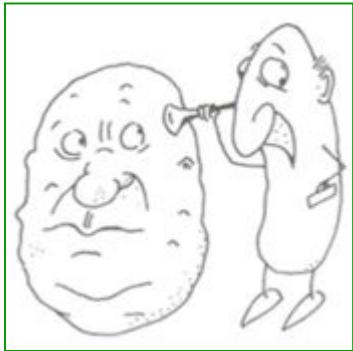

- Moleculaire identificatie & detectie
- Barcodes
- Virulentie
- Taxonomie & evolutionaire

# Belangrijkste ziekten van pootgoed in Flanders' fields (2008-2011)

# *Dickeya @ ILVO*

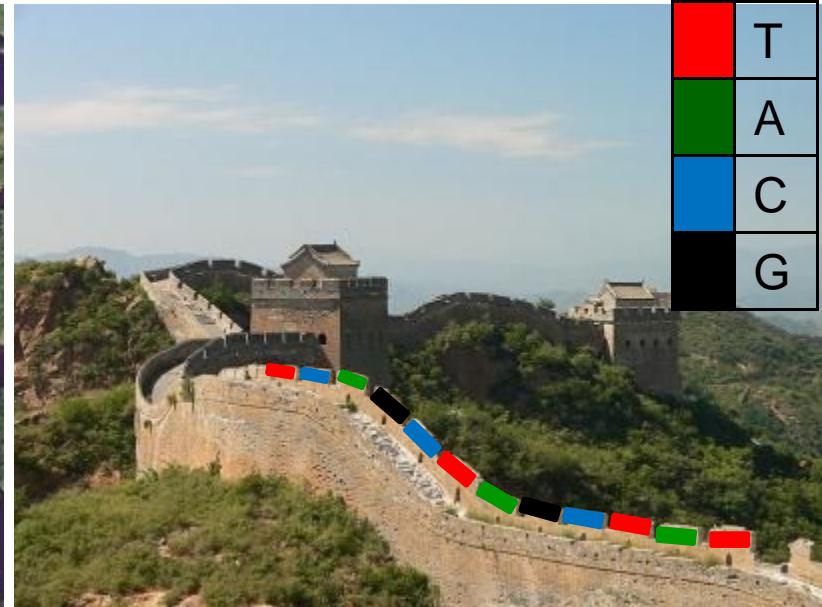

- Identificatie & opsporing

# Identificatie van *Dickeya* (1)

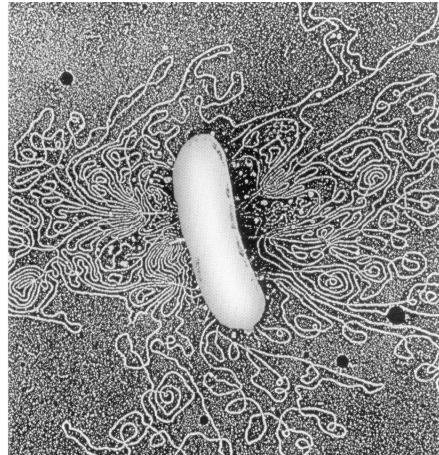

- DNA test
- Alle *Dickeya*: pel ADE

- Onderscheid tussen de *Dickeya* varianten?

# Identificatie van *Dickeya* (2)

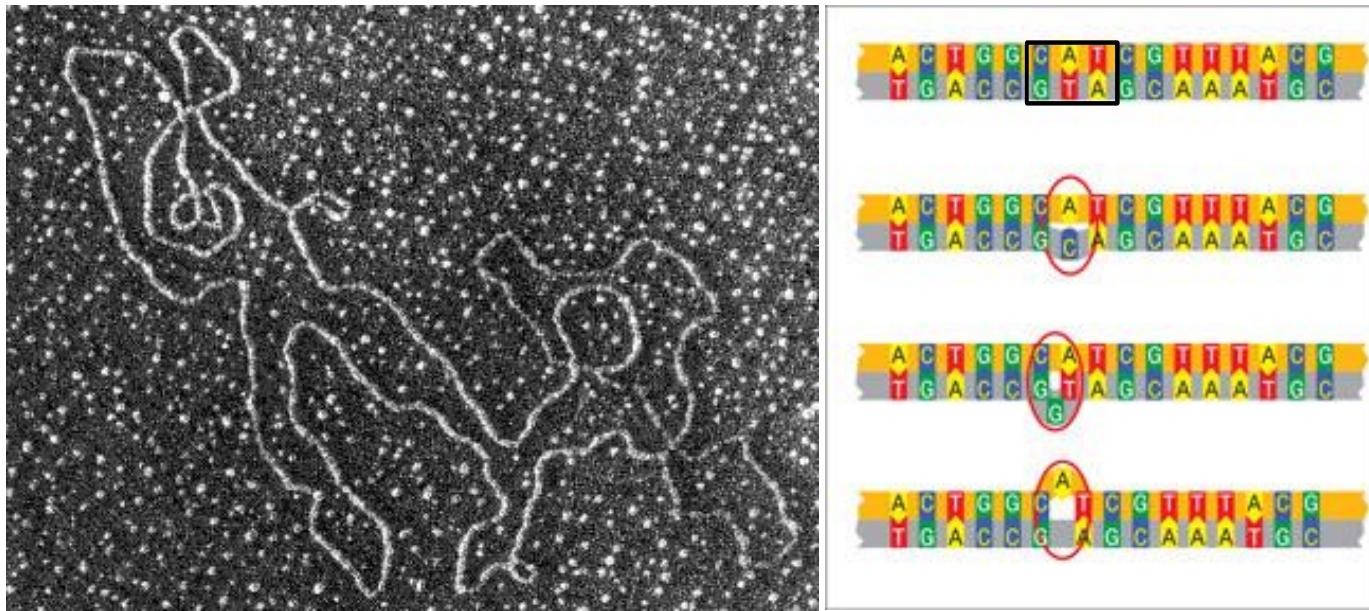

*Dickeya* DNA

Opeenvolging van bouwstenen = **barcode**  
**Verschillen** in *Dickeya* barcodes → identificatie

# Identificatie van *Dickeya* (3)

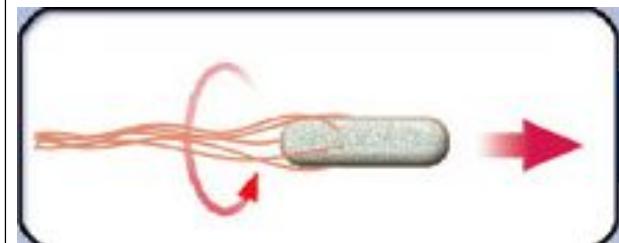

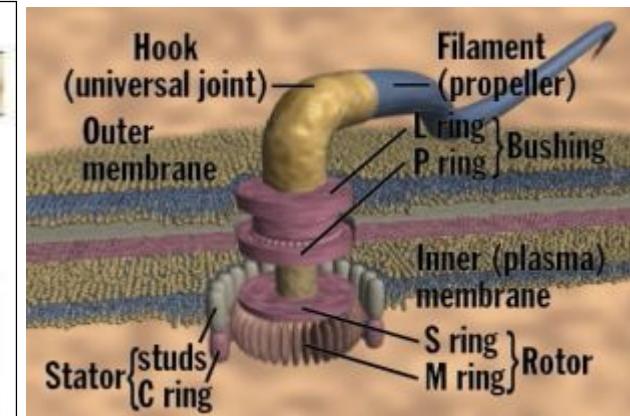

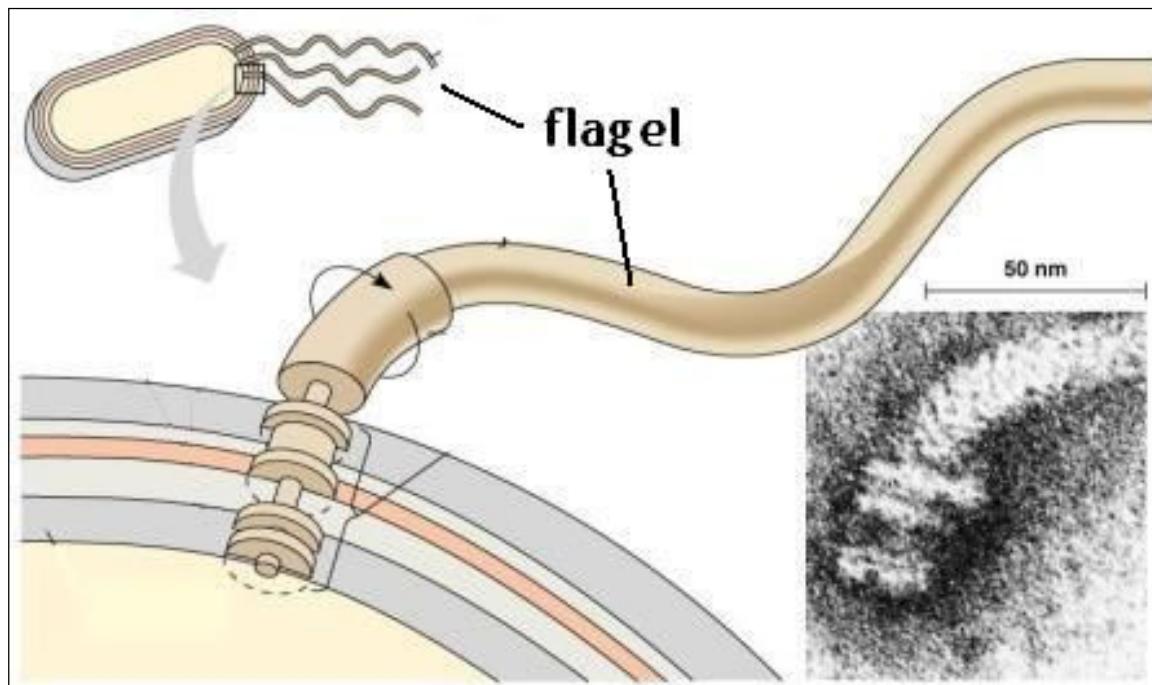

DNA van *Dickeya* = ~4.500.000 bouwstenen

Stukje DNA gebruiken dat in elke *Dickeya* variant aanwezig is maar toch voldoende verschillend is om de varianten te onderscheiden.

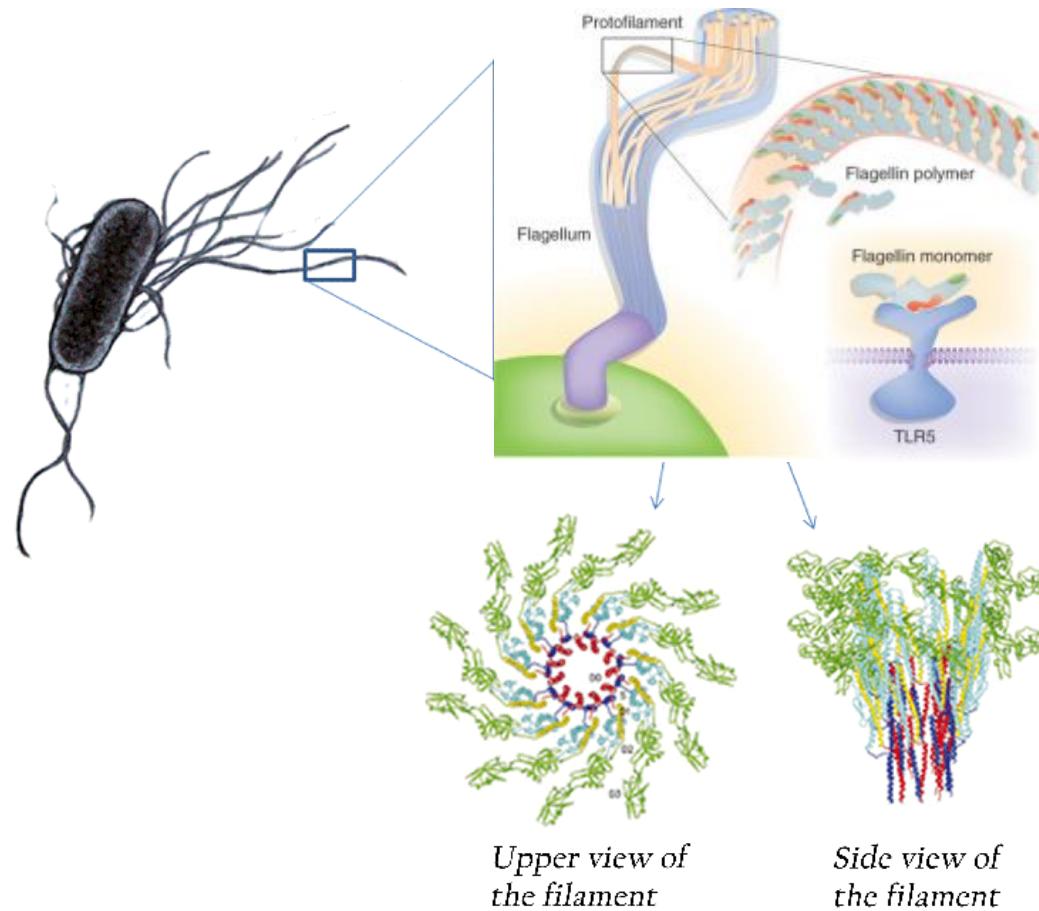

→ flagelline gen

gen → eiwit

# Identificatie van *Dickeya* varianten met het flagelline gen

# Identificatie van *Dickeya* varianten met het flagelline gen

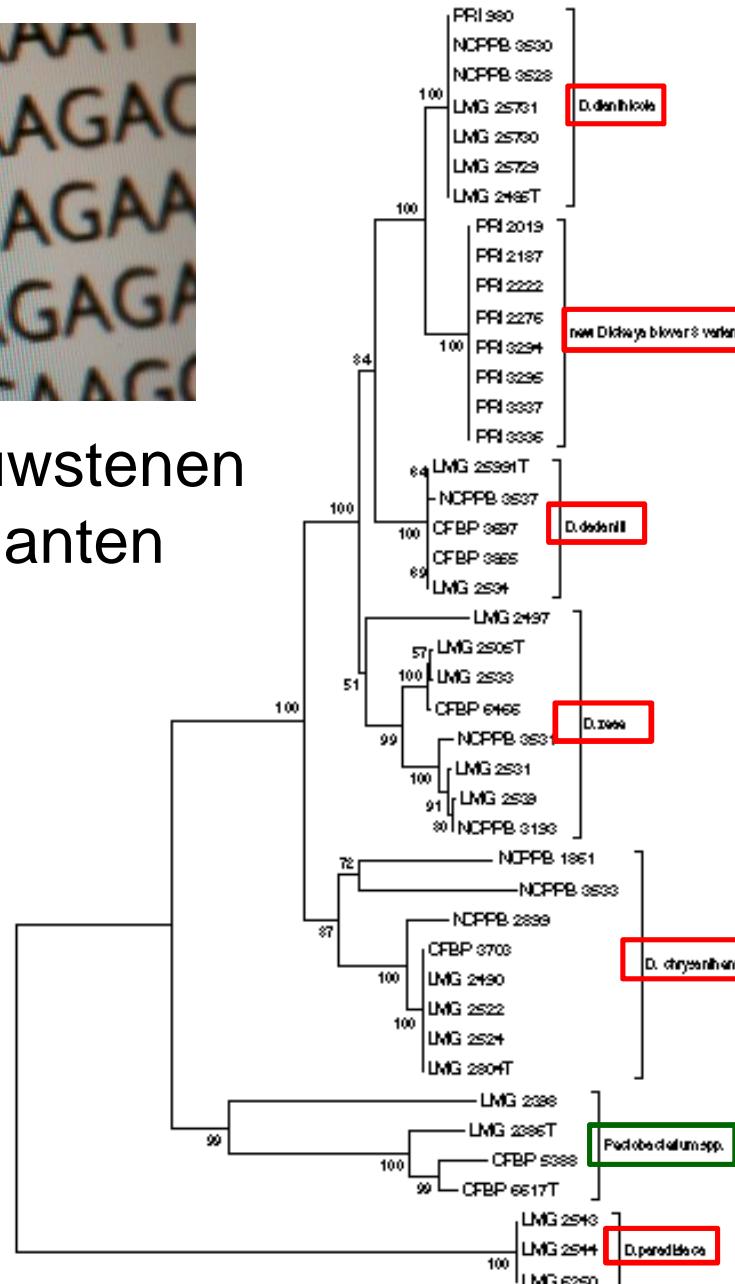

Flagelline = polymeer met vaste ruggengraat en variabele componenten aan de buitenoppervlakte  
Flagelline gen = *fliC*

# *fliC* verwantschap & identificatie van *Dickeya*

CAAGGGAAATT  
TAAGAAAAAGAC  
AACAGAGAGAGAA  
TTGACCAGAGAGA  
TCAAGG

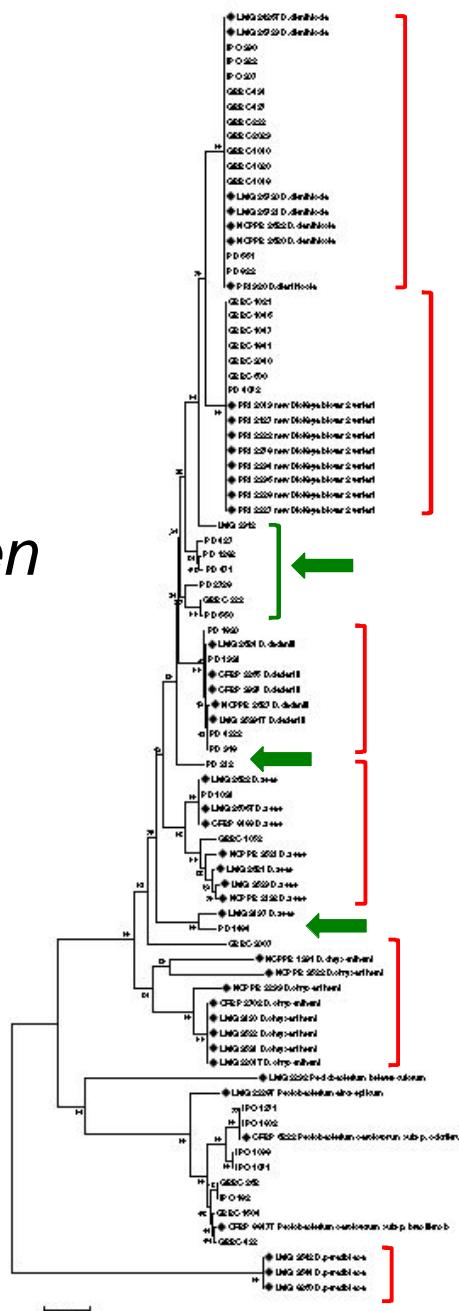

Consensus fragment = 621 bouwstenen  
40 stammen van 6 *Dickeya* varianten  
4 *Pectobacterium* varianten

# *fliC* verwantschap & identificate van *Dickeya* (2)

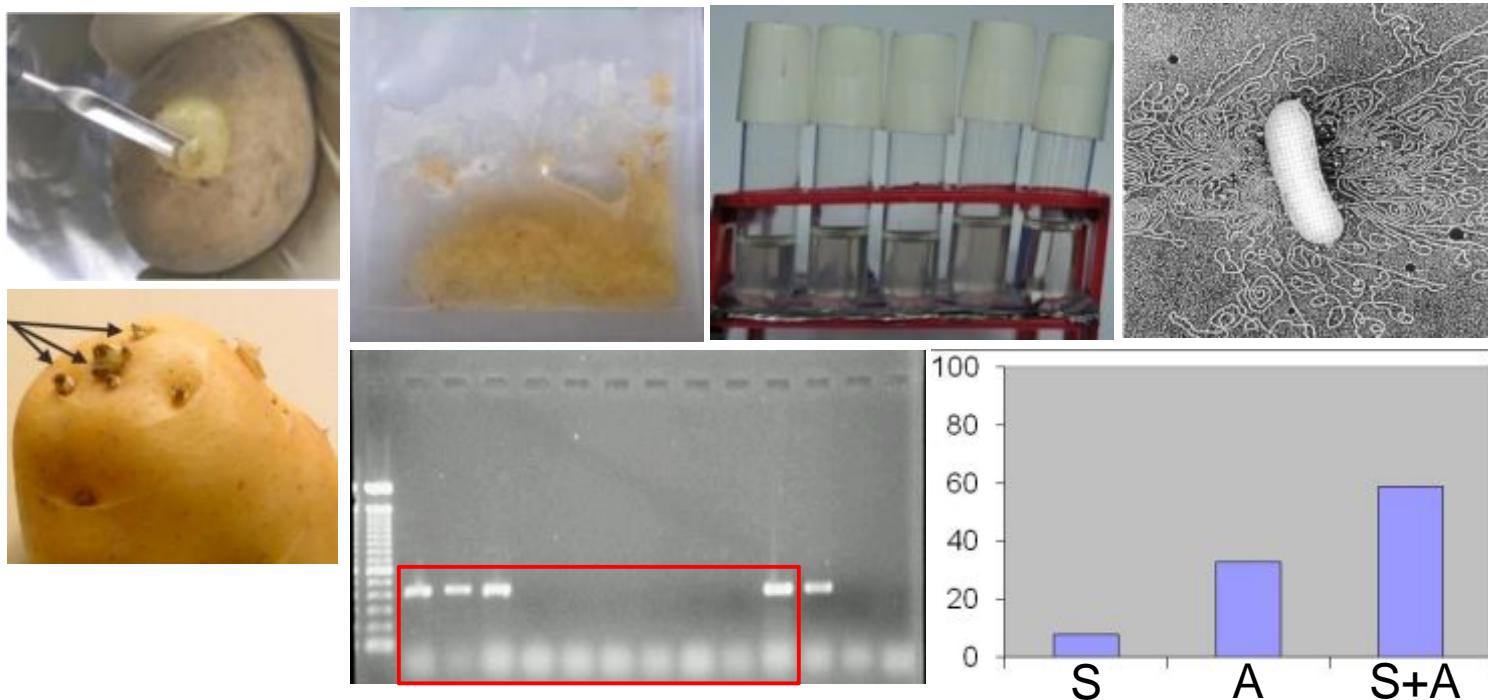

A sequence alignment of DNA fragments. The top sequence is "CAAGGGAAAT". Below it are four other sequences: "TAAGAAAAAGAC", "AACAGAGAGAGAA", "TTGACCAGAGAGA", and "TCAGG". The sequences are aligned vertically, showing homology between them. The text "ARE YOU FLAGELLIN?" is also present here.

40 stammen van 6 *Dickeya* taxa  
38 *Dickeya* & 12 *Pectobacterium* isolaten

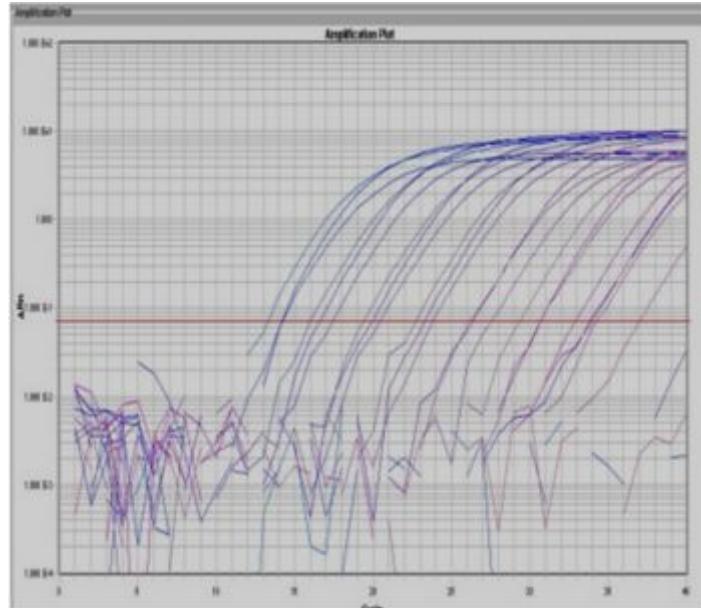

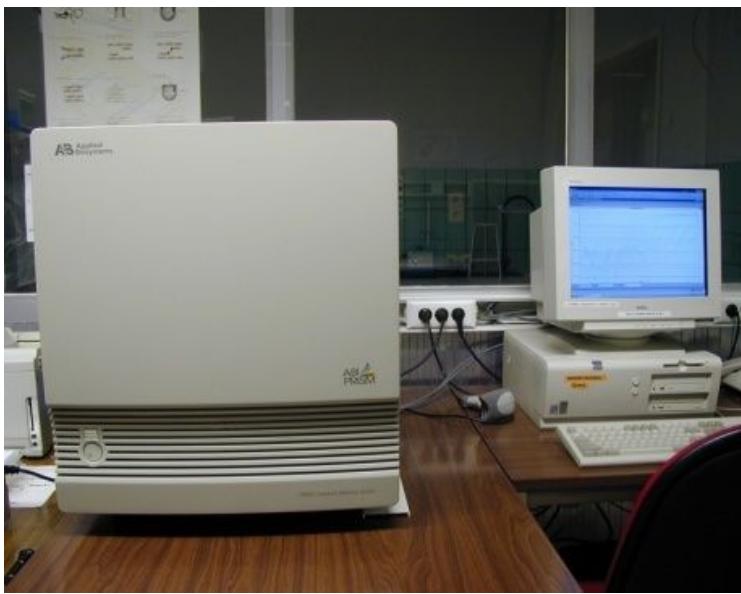

# Opsporing van *Dickeya* & *Pectobacterium* in pootgoed

- 1 monster = 100/200 knollen
- 10 subsamples of 10/20 knollen
- navelpitje (en apikaal pitje)
- 72 uur anaërobe aanrijking in pectinemedium
- *Dickeya* = PCR van het *pelADE* gencluster
- (*Pectobacterium* = PCR van het *peY* gen)

# TaqMan real-time PCR voor *Dickeya solani*

TaqMan real-time PCR voor *Dickeya dianthicola*

Ministerial Decree  
No. (1703) for year 2011

Import Phytosanitary Requirements and Specifications for the  
Importation of Seed Potatoes for Growing Year (2012)

(B) Diseases

1- Imported potato seeds shall be originated in places of production free from the following diseases and its pathogens; these places should be established according to the relevant international standards of phytosanitary measures:

- *Synchytrium endobioticum*
- *Globodera* spp.
- *Trichodorus* spp. and *Paratrichodorus* spp.
- Potato Yellow Dwarf Virus  
and Phytoplasma
- *Clavibacter michiganensis* sub. sp.  
*sepdonicus*
- *Ralstonia solanacearum*
- *Dickeya solani*

d- *Pectobacterium carotovorum* :

It is not allowed to enter infected tubers with infection percentage exceeding 0.5%.

e- *Pectobacterium atrosepticum* :

It is not allowed to enter infected tubers with infection rate exceeding 1%.

f- *Phytophthora erythroseptica*:

It is not allowed to enter infected tubers with infection rate exceeding 0.1%.

# Opsporing van *Dickeya* & *Pectobacterium* in pootgoed

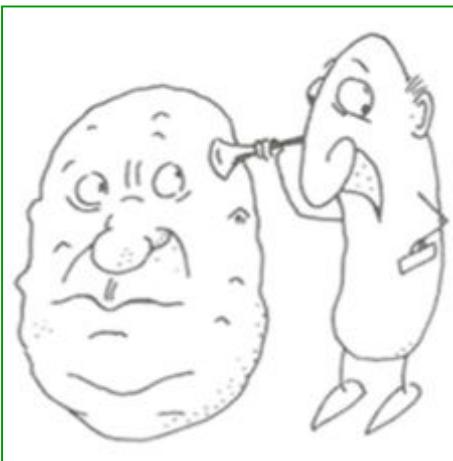

100 monsters	navelpitjes	kapjes
Pca (15)	5	10
Pcc (25)	8	17
D (60)	27	37

Bacterieziek in vermeerdering	2010	2011
Labtest positief	70%	52%
Labtest negatief	94%	97%

NAK, NL

- 20 aardappelrassen
- worteldrenching
- Ddianthicola: 2 stammen
- Dsolani: 1 stam
- celconcentratie:  $\sim 10^8$ c/liter
- 3 x 15 mm

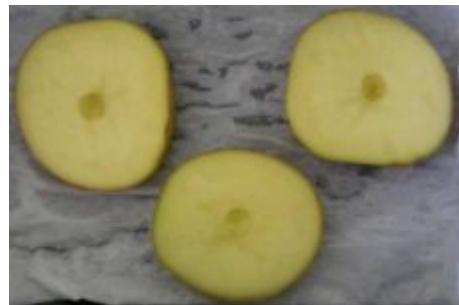

# *Dickeya* virulentie in aardappelrassen (2)

Aantal door *Dickeya* aangetaste knollen

# *Dickeya* virulentie in aardappelrassen (3)

- 36 aardappelrassen
- 3 methoden:

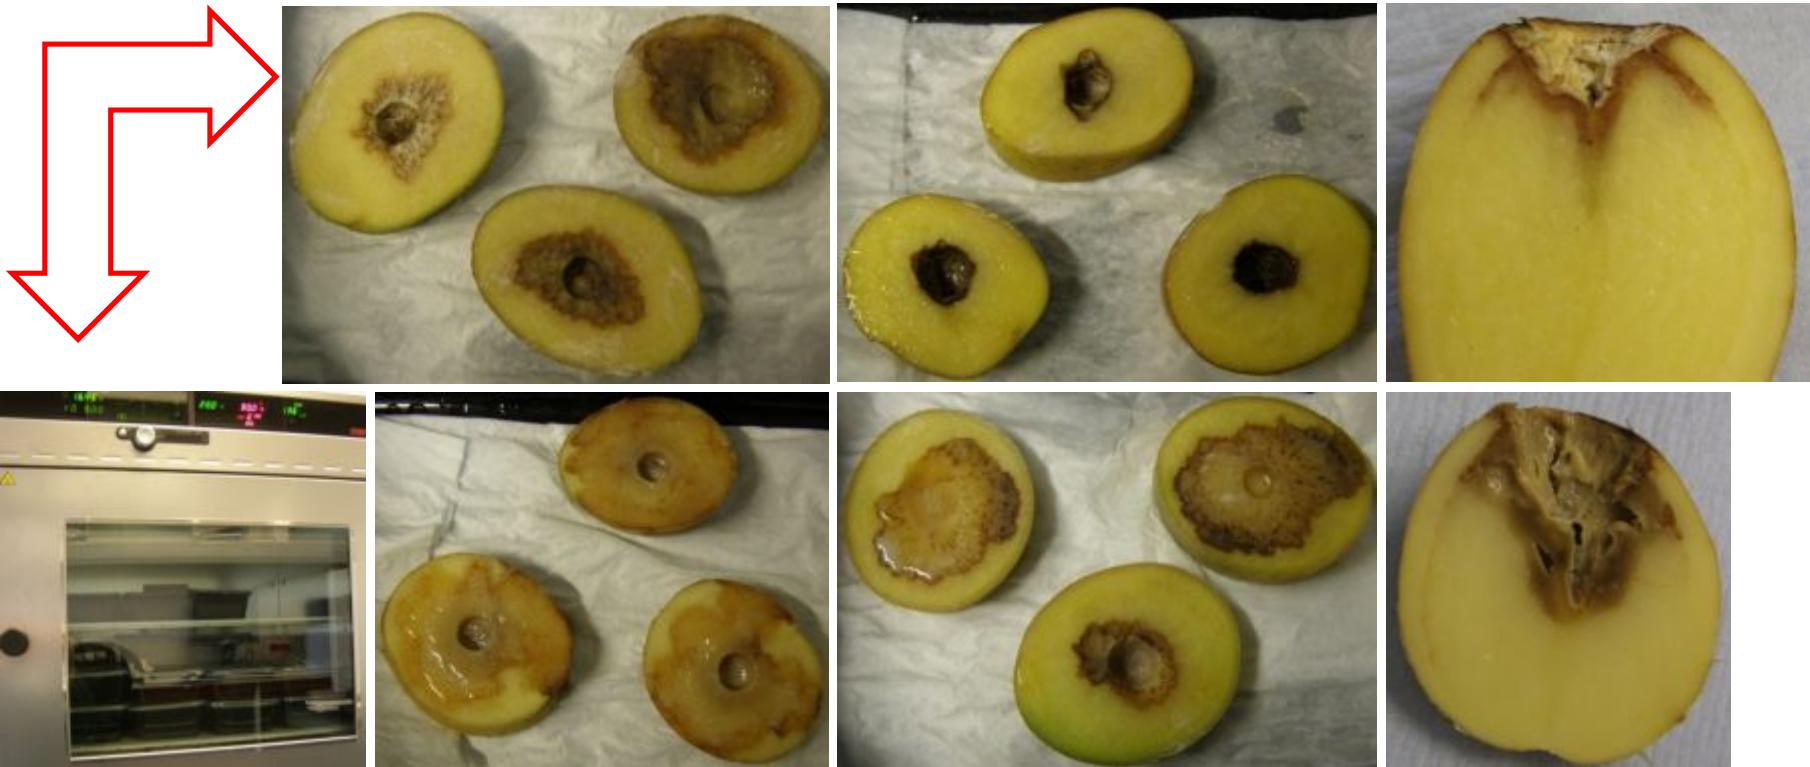

0,1 ml

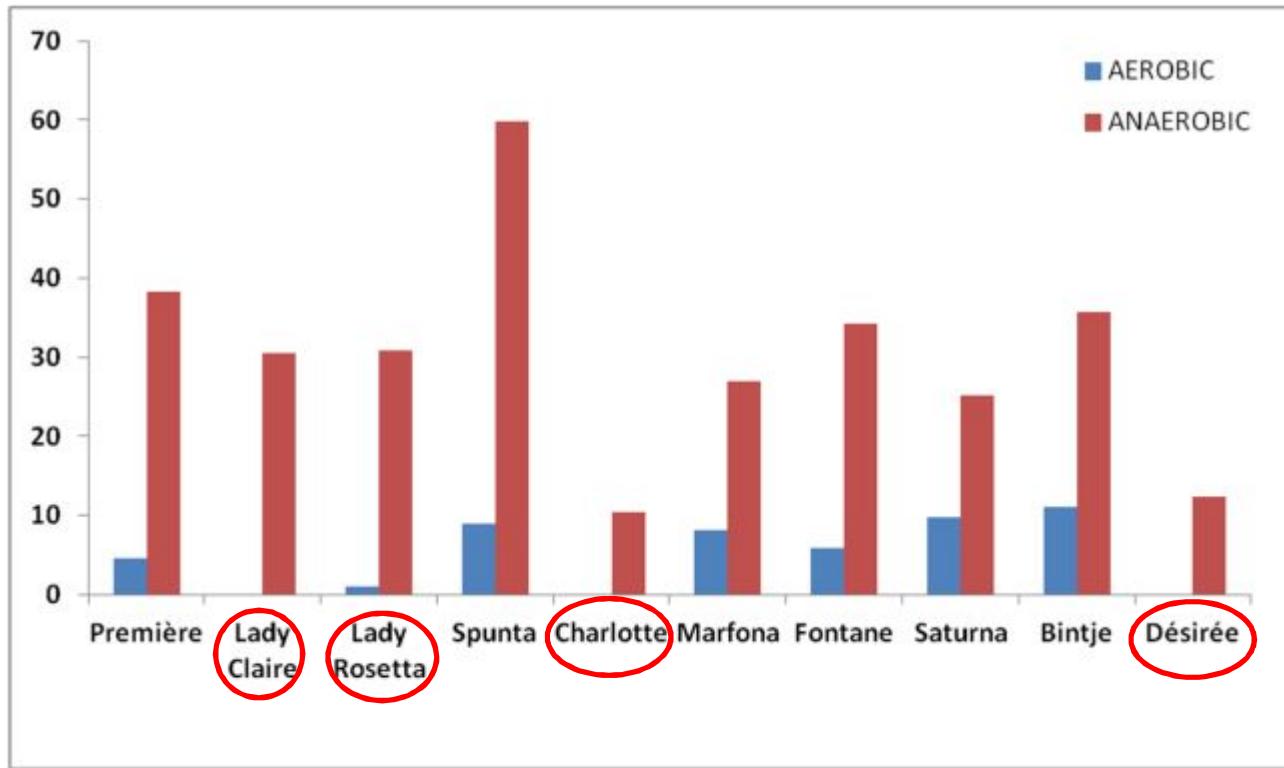

# *Dickeya* virulentie in aardappelrassen (4)

- 2 celconcentrations: ~ 1 miljoen & ~ 50.000 cellen per knol
- 3 dagen aërobe en anaërobe incubatie bij 28°C (20°C)

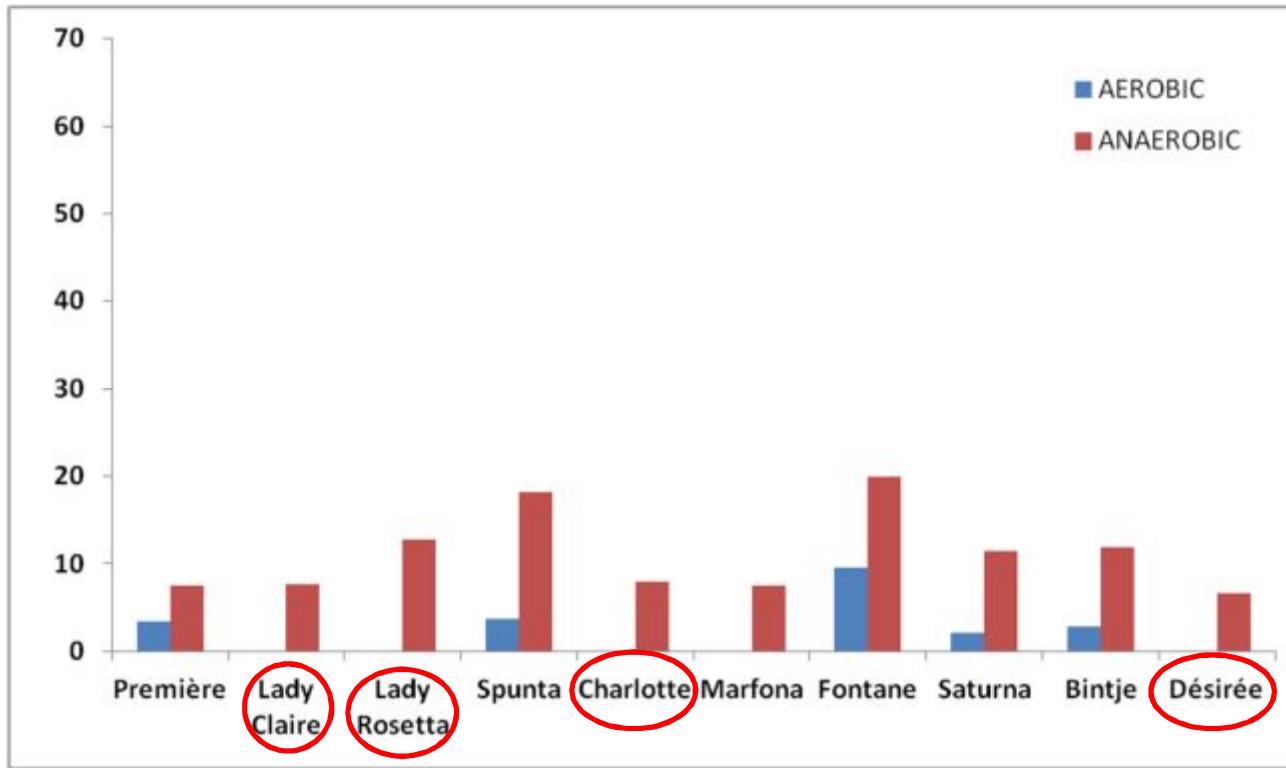

# *Dickeya* virulentie in aardappelrassen (5)

*D. solani* GBBC 1012, % gemacereerd knolweefsel

# *Dickeya* virulentie in aardappelrassen (6)

*D. dianthicola* GBBC 489, % gemacereerd knolweefsel

# *Dickeya* virulentie in aardappelrassen (7)

<b>Samenvatting</b>	<b>aëroob, 28°C</b>	<b>anaëroob, 28°C</b>
Ddi 489	2,99	11,39
Dso 1012	4,66	28,10

% gemacereerd knolweefsel na 3 dagen

# *Dickeya* @ ILVO

- *Dickeya* in waterlopen

# *Dickeya* in waterlopen (1)

*Dickeya zae*: VK, Finland, Spanje  
*Dickeya solani*: Schotland, Wales  
nieuwe, onbenoemde *Dickeya*

## *Dickeya* in waterlopen (2)

*Dickeya* infecteert langs de wortels van de aardappelplant.

Beregeling is een risico voor insleep.

Maar hoeveel *Dickeya* cellen per liter?

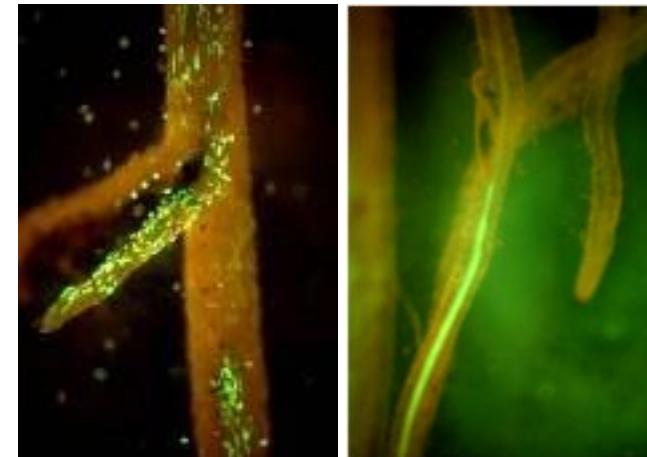

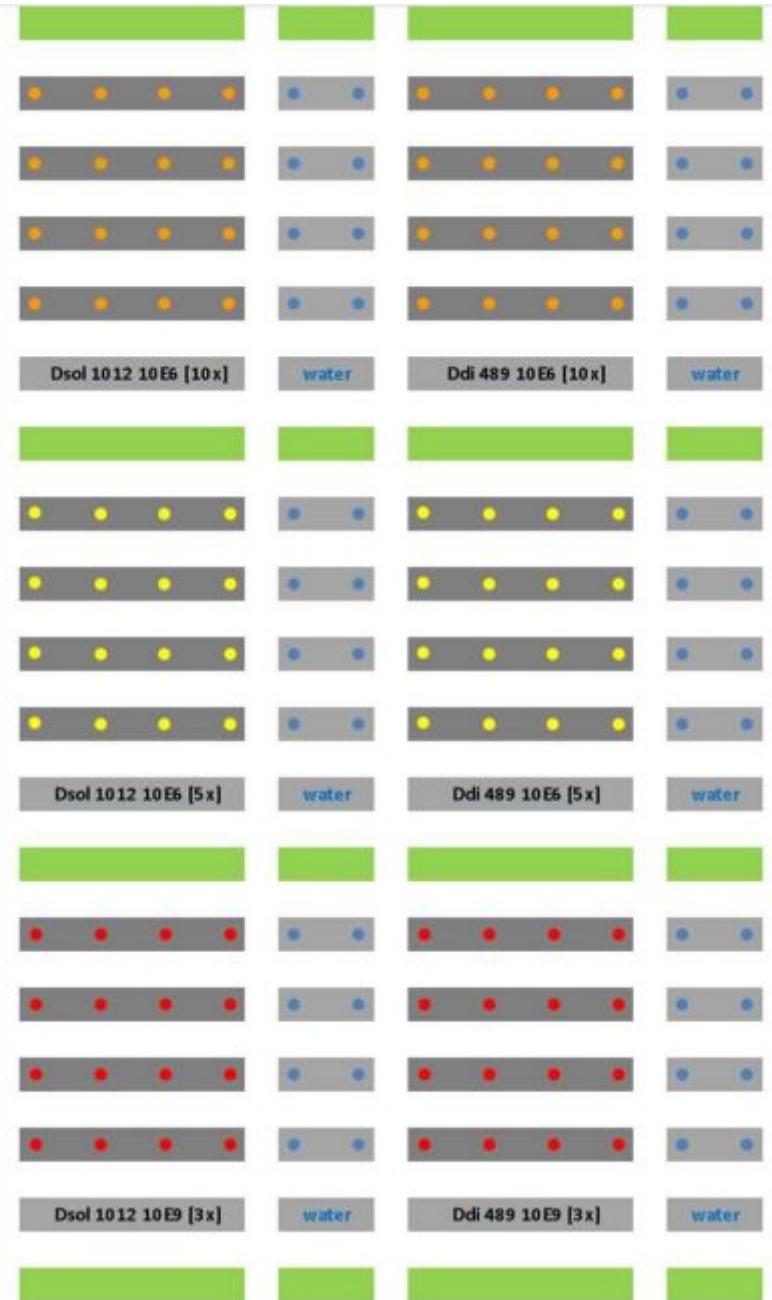

Moeilijk exact te bepalen want voor de analyse wordt *Dickeya* eerst aangerijkt.

Als *Dickeya* werd uitgekweekt: 10000 – 100000 cellen/liter

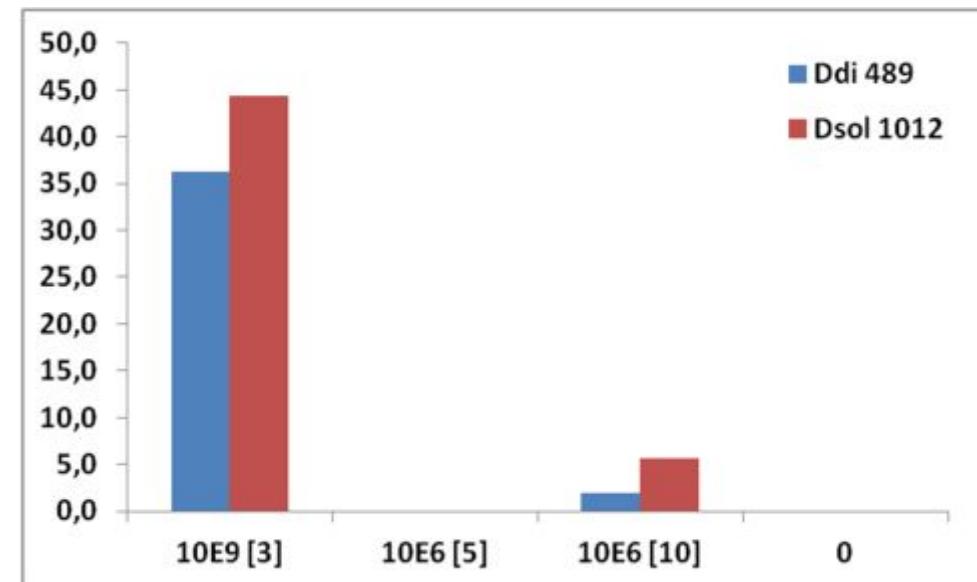

Risico?

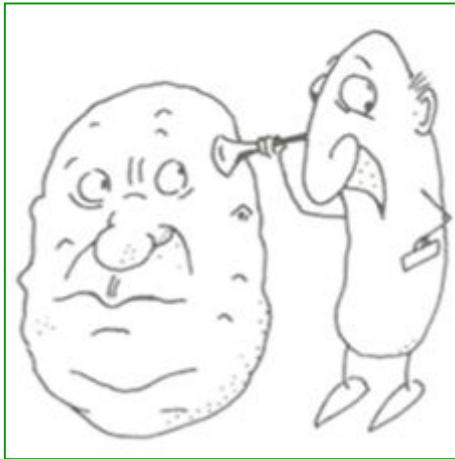

# *Dickeya* in wateropen (3)

10 mm = 10 miljoen *Dickeya* per m<sup>2</sup>

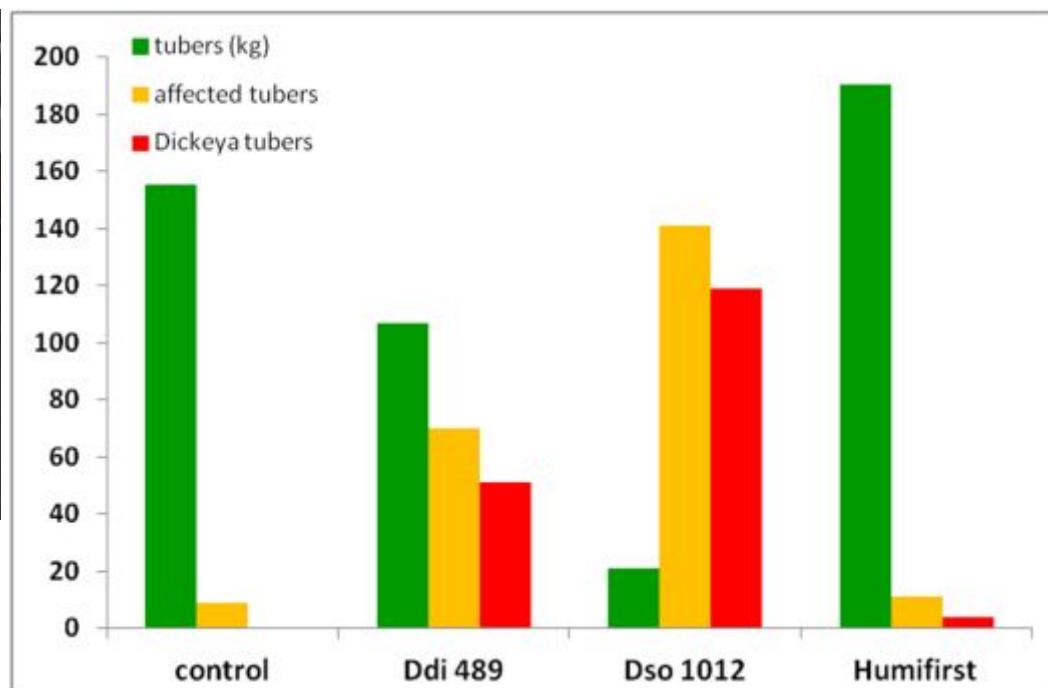

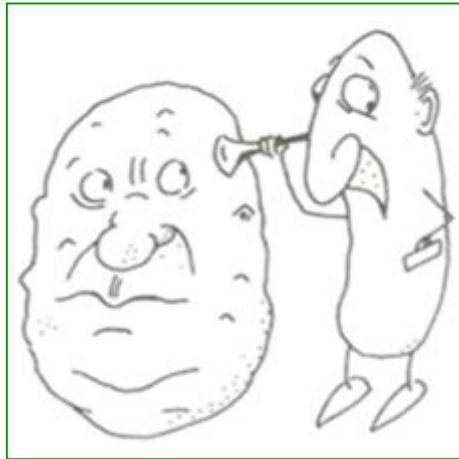

# *Dickeya @ ILVO*

- Contactbesmetting

# *Dickeya*: contact contamination

- Akkerkwesties

# Akkerkwesties: *Dickeya* aan wortels van onkruiden

VK, Finland, Israël

# Akkerkwesties: *Dickeya* na maïs, tarwe of wortelen

Frankrijk, Zwitserland

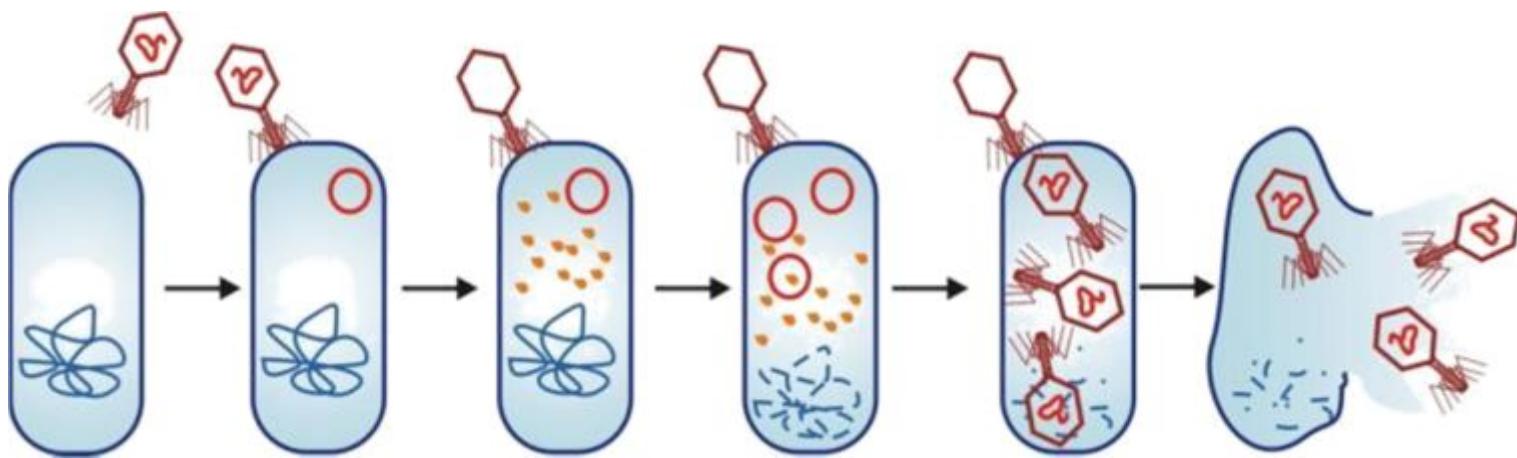

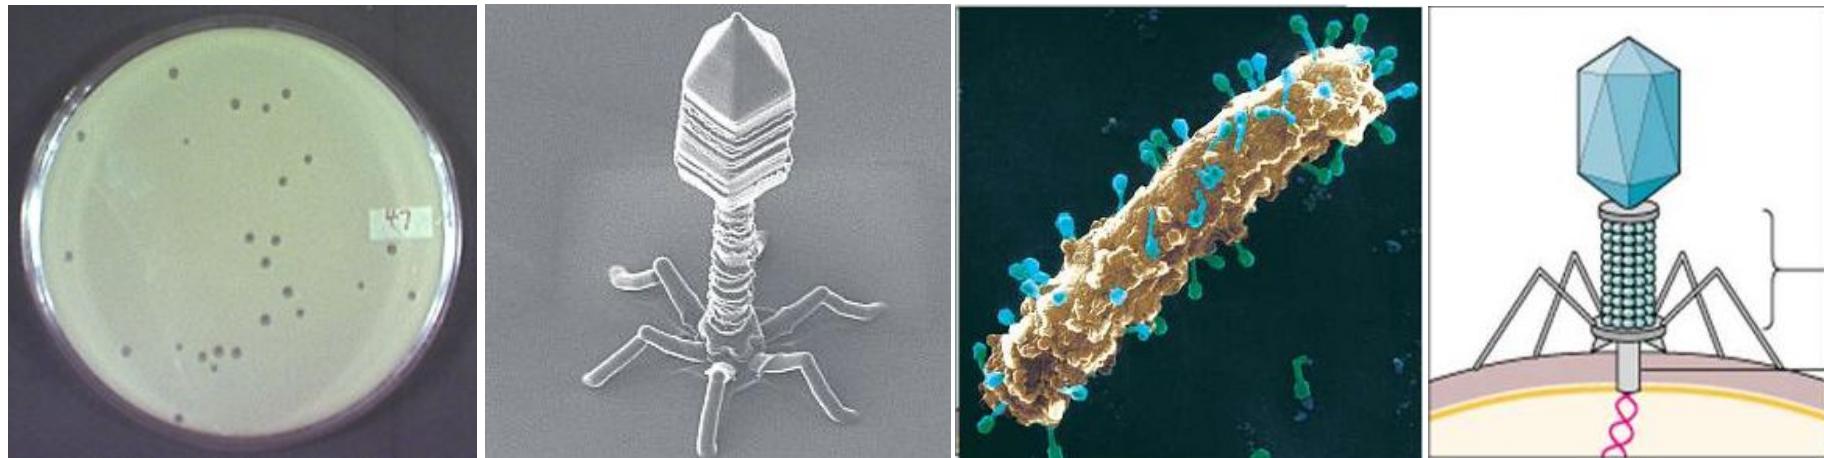

# *Dickeya @ ILVO*

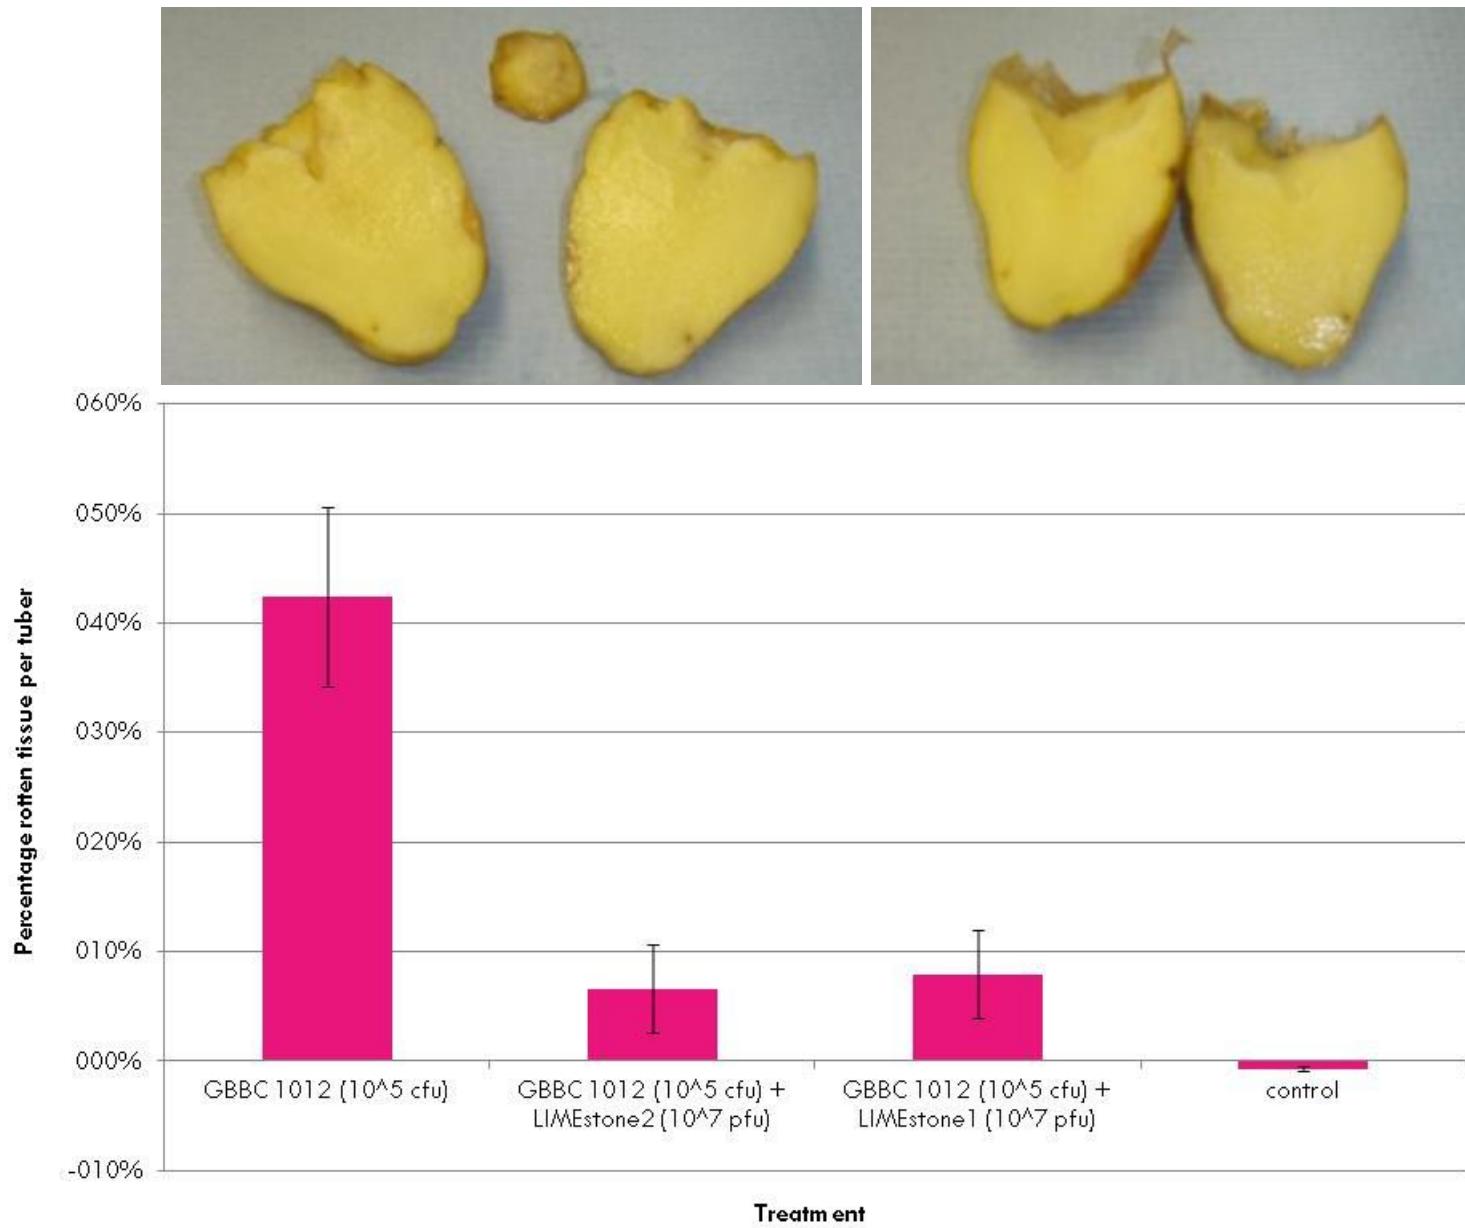

- Bio control

# Biocontrole van *Dickeya*: bacteriofagen (1)

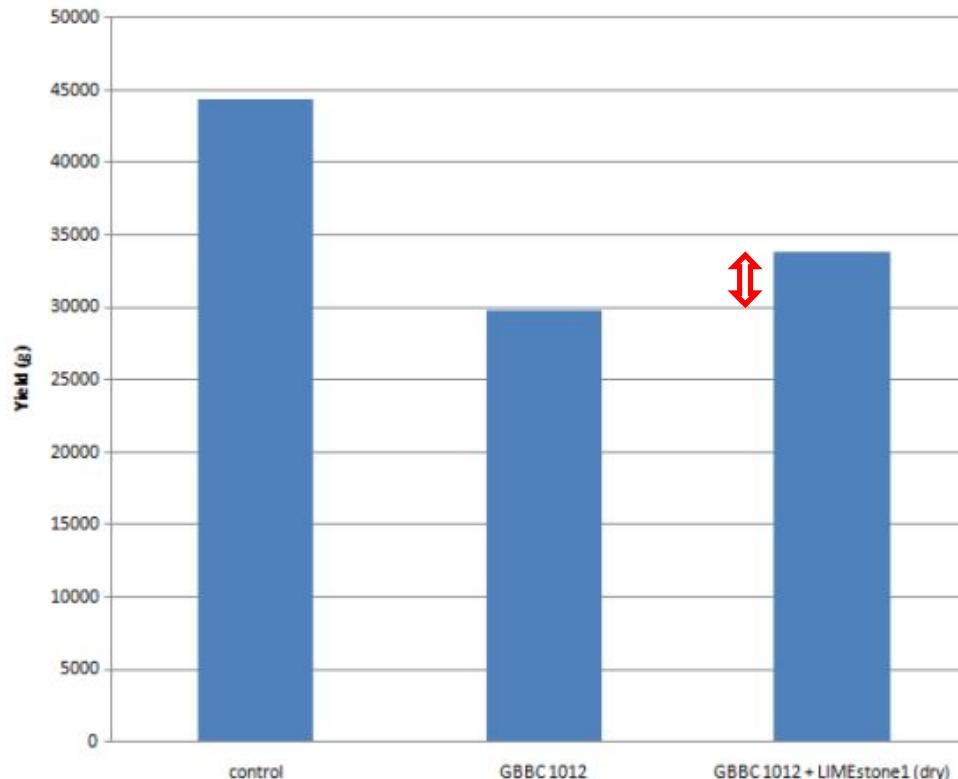

Bacteriofagen = virussen van bacteriën

# Biocontrole van *Dickeya*: bacteriوفagen (2)

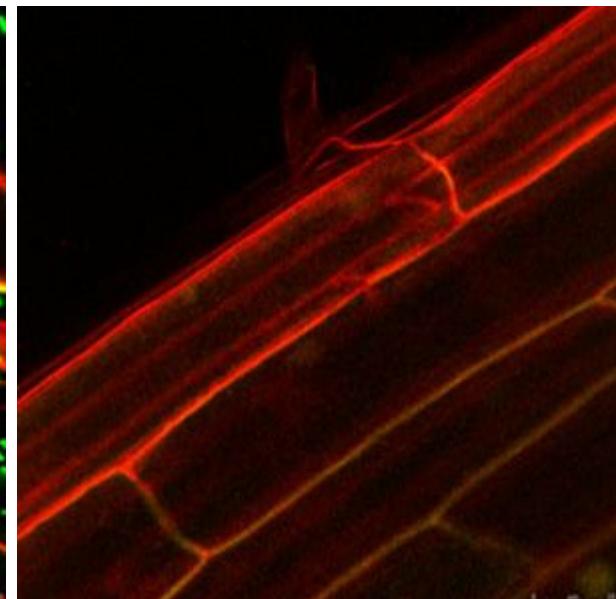

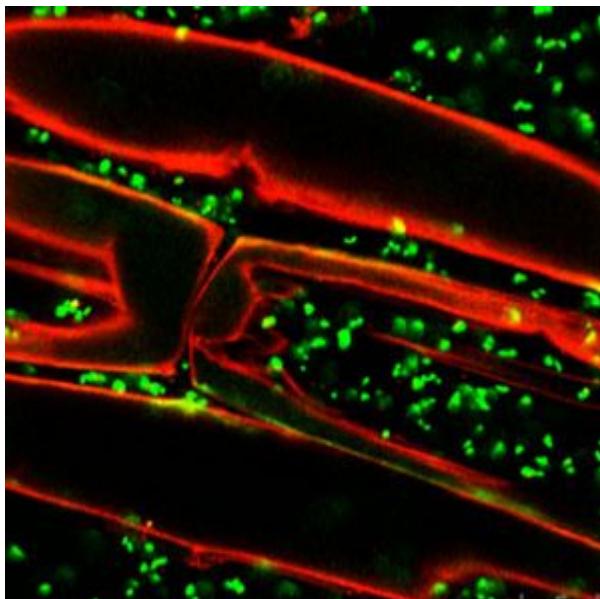

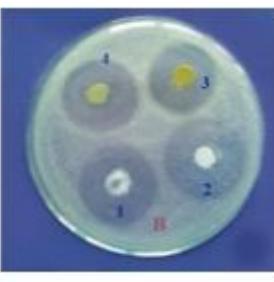

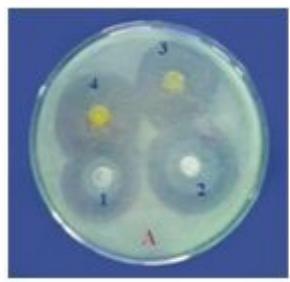

# Biocontrole van *Dickeya*: bacteriofagen (2)

PRI, NL

# Gezond pootgoed @ ILVO 2011: samenvatting

- Survey in pootgoed
  - ~52% bacterieziek in survey
  - Meer *Pectobacterium* dan *Dickeya*
  - Colletotrichum*: ~ 25%
  - knolbehandeling
- Identificatie en opsporing
  - DNA test voor *Dickeya* varianten
  - Real-time opsporing van *D. solani* (*D. dianthicola*)
  - Partijtoets keuringsreglement
    - 100 knollen
    - navelpitjes met schil
    - enkel *Dickeya*
    - 'nagenoeg vrij'

# Gezond pootgoed @ ILVO 2011: samenvatting

- Rasgevoeligheid
  - D. solani > *D. dianthicola*
  - anaëroob > aëroob
  - + = chipsrassen, Désiree, Charlotte
  - = Spunta, Bintje, Fontane
- *Dickeya* in waterlopen
  - meestal andere *Dickeya* dan in aardappel (uit kasteelt?)
  - risico van insleep door beregening is gering
- Contactbesmettingen
  - 30% - 85% reductie
  - D. solani > *D. dianthicola*

# Gezond pootgoed @ ILVO 2011: samenvatting

- Akkerkwesties

*D. solani* hecht zich aan wortels van akkeronkruiden  
akkerkers, ganzevoet, knolcyperus, kleine brandnetel

voorvrucht: maïs < wortelen < tarwe

- *Dickeya* biocontrol

faagtherapie

antagonist bacterie

- Project 4/2012 – 3/2013

survey & opsporing in pootgoed

rasverschillen
